

LESSON 5

TASK

main.py

```
1 two_digit_number = input()
2 # 🚫 Don't change the code above 👈
3 #####
4 # Write your code below this line 👇
```

RESET

RUN CODE

SUBMIT

INPUT

OUTPUT

1 39

Instructions

Write a program that adds the digits in a 2 digit number. e.g. if the input was 35, then the output should be 3 + 5 = 8

**Warning.** Do not change the code on line 1. Your program should work for different inputs. e.g. any two-digit number.

The last line of your program should print the result.

Example 1 Input

39

Example 1 Output
