TASK

Instructions

Look at the code in the code editor on the left. There are errors on all 4 lines of code. Fix the code so that it runs without errors.

Example Output

Output

```
1 Day 1 - String Manipulation
2 String Concatenation is done with the "+" sign.
3 e.g. print("Hello " + "world")
4 New lines can be created with a backslash and n.
5
```

Hint

The output in your program should match the example output shown above exactly, character for character, even spaces and symbols should be identical, otherwise the tests won't pass!
